

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

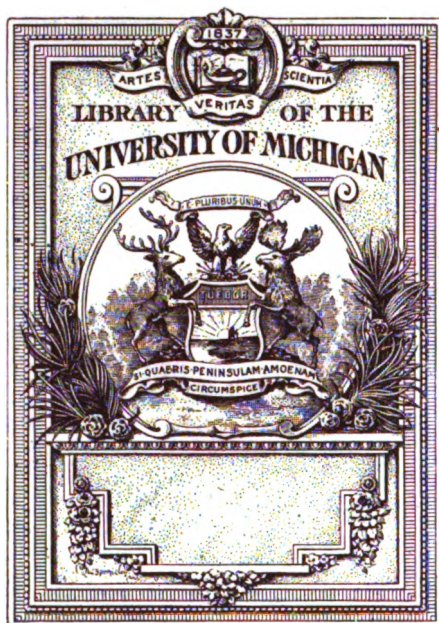

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. SEVENTEENTH REPORT

(THIRD BIENNIAL)

RELATING TO THE

REGISTRATION AND RETURN

OF

BIRTHS, MARRIAGES, DIVORCES, AND DEATHS

IN NEW HAMPSHIRE

FOR THE YEARS 1898 AND 1899.

VOLUME XIV . . . NEW SERIES

MANCHESTER, N. H.

ARTHUR E. CLARKE, PUBLIC PRINTER

1900

STATE OF NEW HAMPSHIRE.

OFFICE OF THE REGISTRAR OF VITAL STATISTICS.

CONCORD, October 1, 1900.

To His Excellency the Governor and the Honorable Council:

I have the honor to submit herewith, in accordance with the laws of the state of New Hampshire, the seventeenth report relating to the registration of births, marriages, divorces, and deaths in this state for the years ending December 31, 1898, and December 31, 1899.

The number of births reported in the state for the year 1898 was 8,321, or 138 less than was reported in 1897; the number of marriages was 3,793, or 17 more than was returned in 1897; the number of deaths was 6,743, or 284 less than in 1897.

The number of births reported in the state for the year 1899 was 8,118, or 203 less than was reported in 1898; the number of marriages was 3,741, or 52 less than returned in 1898; the number of deaths was 7,045, or 302 more than was returned in 1898.

The population of the state, calculated upon census returns, was 404,322 in 1898 and 407,938 in 1899, and the proportion of births, marriages, and deaths to each one thousand of the population is as follows:

For the year 1898, birth rate, 20.58; marriage rate, 9.38 (couples); divorce rate, 1.10; death rate, 16.68.

For the year 1899, birth rate, 19.90; marriage rate, 9.16 (couples); divorce rate, 1.06; death rate, 17.27.

The tables have been arranged substantially as in the last registration report.

Reference should be had to the index at the end of this volume for any subject included in this report.

Respectfully submitted.

Irving A. Watson

Registrar of Vital Statistics.

Table No. 2 represents the population of New Hampshire for each year from 1880 to 1900, inclusive, and is calculated from the census returns of 1880, 1890, and 1900. In this table the population for each year, except the census years, is calculated, and is believed to be approximately correct. The figures in the table mentioned are estimated upon the basis that there has been a steady increase in the population in the same ratio as was shown between, the census returns of the years named.

TABLE No. 3.

Franklin	5,700	137	24.03	111	19.47
Berlin	8,000	313	39.12	350	43.75

Table No. 4 gives the population, number of births, and the birth rate per 1,000 of the population, for the several cities of the state, based upon the estimated population. The latter, it will be observed, differs somewhat from that given in previous reports, because the census returns of population for 1900 are available, and the figures given for each city are revised in accordance with official returns.

Table No. 41 exhibits the number of deaths from the more prominent so-called zymotic diseases, 1884-1899, inclusive. This table presents an interesting study in showing the fluctuations in these diseases from year to year. It will be seen that of all the diseases in this class, cholera infantum causes the greatest number of deaths, while typhoid fever holds the second place, and diphtheria the third.

Table No. 42 gives the number of deaths from the chief constitutional diseases from 1884 to 1899, inclusive. The apparent diminution in the number of deaths reported under dropsy is probably due to a more proper and scientific return of the cause of death by the attending physician,—dropsy itself representing a symptom only. The comparatively steady ratio of deaths from cancer is very noticeable. The most striking characteristic of this table is the large decrease in the number of deaths from consumption.

The number of deaths from the principal local diseases from 1884 to 1899, inclusive, is given in Table 43. The average number of deaths in this class of diseases for the period given is 2,745, while the total for the year 1899 is 3,216. It will be noticed that there has been a relative increase in the period named of the number of deaths under apoplexy, pneumonia, and Bright's disease particularly.

‡ Meningitis and cerebritis included.

Table No. 45 gives the mortality from twenty prominent causes of death from 1884 to 1899, inclusive, together with the respective position held by each for the years given. It will be seen that consumption ever ranked first as a cause of death in each of the years named excepting in 1892, 1898, and 1899. The dropping of this disease to the fourth position in the latter year is a matter of interest. The total number of deaths from consumption in the year 1899 was 683, a number considerably less than was ever returned in a single year.

TABLE No. 46.

Table No. 56 shows the mortality from pneumonia by age periods, from 1883 to 1899, inclusive. It will be seen that it is a disease chiefly of infancy and old age. The increase in the total mortality is noticeable; that of 1899, with a single exception, being larger than was ever before returned in a single year; the heavy death rate in those two years being due largely to influenza, the latter disease having a greater mortality in these years than in any other of the returns.

It will be seen by the above table that in 1899 the number of deaths from diphtheria was less than ever before returned in a single year. A reduced death rate from this disease since 1893 is shown by a glance at the column of totals. It will be interesting to know to what extent this reduction is due to the use of anti-toxine.

Number of deaths from typhoid fever for the past 16 years, together with percentages and death rates, is given in Table No. 69. The number of deaths from this disease returned in 1899, to wit, 92, is exactly as was returned in 1897, the figures for those two years being lower than any other given for a single year.
